FINE RESULTS AT THE PRINCE MINE

Been Doubled in Past Few Months.

Smelter Returns Show Good Increase in Values Over

infined at eight car lone space day this one compling entirely from the Prince property.

Within the next few days the mannature of cre-will be hierassed very materially and the grade will be increased as well-killed the grade will be forced to the deal possibilities of the China company and and ensures surrice is per continued in the least, The common hierarch of the results followed grade rock will be increased as the consideration of the results followed grade rock will be increased as the results followed grade rock will be increased as the results followed grade rock will be increased to the grade shipments of the least, The common hierarch of the Prince Consolidated property, as political will be Mr. Smith, is the fact that the smitter returns on the average shipments over any of the samplings to which the mine was unfected prior to the deal by which the control was passed. This bigher range of silver and lead is allowing far heter earnings than were autiet, pated. Mr. Smith naturally is well obsisted range of silver and lead is allowing far heter earnings than were autiet, pated. Mr. Smith naturally is well obsisted with the way this property has responded to development.

When asked regarding the home Enn admits the mine was in first-class Sampe where he has visited it, and recent reports were extremely satisfactory, he stated.

HALIFAX ORES MAY

BE SENT TO MILL

Although work on the 166-foot level of the Bulliax-Tononah mine has not as yell extended to development of the development of the bull probable he made at all cents, with a first production of production at Ray would be about 9 cents on will be made to the price of the bull and the coast of production at Ray would be about 9 cents on will be probabl

Although work on the 100-foot level of the Halifax-Tonopah mine has not as yet expessed any more ore, development on the 1000-foot level is so highly encours willing that a station will now be cut at that point and the question of shipping the ore to the old Belmout mill is now index consideration.

The vein on this level has an almost due north and south course and dips to the cast, and a south drift on this has now been run thirty-five feet on from six to seven feet of ore carreing good milling values. There are so consistent that a station at this point will be started and development of this vein continued—Tonopah Miner.

DRIFTS FIFTY FEET ON MALACHITE ORE

Developed Ore Tonnage Has One Car of Flfty Tons Sent to Market Every Other Day at Present.

ORE TO END LINES The first authentic information regarding the Verington Malaculte company The first authentic information regard property since the crossout exposed twenty-four feet of 7 per cent copper ore the first part of the month was received on Tuesday by General Manager Grant Snyder, and this was to the effect that It is evident from the report given on Tucsday of the Prince Consolidated conditions by General Manager A. V. Smith that the controlling interests are determined to lose no time in beinging this proposition not only into the large production division, but in the great mine class of the property less than three months, and during this time the work, and during this time the work prosecuted has doubled the blocked tonings of the mine from what it was on the day of assuming charge by him.

To the Tribure vesterday, Mr. Smith stated that his rapid progress had been possible by sending workings out to the south in virgh territory, and the continuation of the resources have been demonstrated now beyond question to the and lines of the property. Shipments of ore at the present time are being maintained at eight car lots each day this ore coming entirely from the Prince property.

Within the next few days the management alaes to begin onestitate in the property are confined to had a continued at eight car lots each day this ore coming entirely from the Prince property.

Within the next few days the management alaes to begin onestitute in the argument of the secondary of the secondary that the content in the given of the secondary that the content in the property of the data time to open the ore as planned, the Malachite and property afforded this lugress to valley property afforded this lugress to balanced at eight car lots each day this ore coming entirely from the Prince property.

Within the next few days the management alaes to begin onestitute in the first feet, the arready of the tite, the drifts are entirely again to date, as outside of the fact that the drifts are entirely again to date, as outside of the fact the drifts are entirely again to date, as outside of the fact the drifts are entirely again to date of the substitute of the Mason Valley property. This development work affords a fifty-ton car each the fact that the control of the fact the again to the fact the drifts are entirely again to date to distas the management so far had drifted in ore

MARKET QUIET, BUT TONOPAH IS THE LEADER OF CAMPS

Pronounce It After Visit to Mines.

PERMANENCE IS SHOWN

Great Extension of Output Predicted During the Very Near Future.

Seeley W. Mudd, one of the best known mining engineers of the country and who has been connected with the development of some of the greatest of the posphyry coppers, has been making a visit of inspection to several Tenopal nines in the company of Frank A. Keith, Mining company After making an in-Mr. Mudd made the following state

ment to the Tonopan Miner:

"Tonopan with surprises and interesta
me greatly on account of the extent of
the great ore bodies, the uniformity of
the values, the very large tomage of
svallable ore and the high efficiency of
the milling plants which recover a greater percentage of the assay values than
I anticipated.

Is Much Impressed.

Is Much Impressed.

"I was very deeply impressed with the underground workings of the properties I visited. Both the Extension and the Belmont are great intines, baving remarkable ore bodies, and being at the extreme west and east ends of the producing zone seems to give great promise of further extension of the vein system. These properties and the great number of veins in the Tonopah Mining company's property prove the intense mineralization of the district whileh is further exidenced by the remarkable showing in the Merger mine, certainly the most important recent development in the district, not only because of the average high values of the ore, but also because of its very strong vein, which lends great possibilities to the unprospected territory in that vicinity.

"Tonopah is a surprise and delight to me. The town is so prespectors, the mines are developing so splendidly and the people so filled with enthusiasm that my visit has been most pleasant. It is a treat to come to a camp where there are very substantial reasons for enthusiasm, such as I see here, in the developed mines and the prospects, Tonopah will, I think, see very many important developments in the next year, and it is undoubtedly a camp of long life. If am glad I have become interested in it."

"I am very gind to again become actively interested here," said Frank A. Keilh, "Every time I return to Tonopah it looks better and I anticipate great exitension of the ore producing area in the near future. It certainly is a wonderful camp—the best precious metal camp in the country."

ZINC OUTPUT MADE

Production and Exports; Imports Smaller.

The production of primary (mine) from domestic ore in 1911 was 271.671 short tons, valued at \$30.964.274. coording to a statement just issued by the United States geological survey This is the greatest production in the history of the industry and shows an in crease of 12.142 tons over 1910. The im-ports of spelter, however, reached the lowest figures in recent years, while ex-ports increased about one-half over those of 1210.

The great growth of the sine industry in the United States is indicated by the following figures:

Freduction of speller by the United States from domestic and foreign ores, 1880-1911—

The following table is of interest as showing the principal sources of the domestic zinc production:

Production of zinc in leading states in 1911, short tons

State.	Ecoverable zinc	Crude sine and sinc-lead ore
olorado Kansas Kansas Montana Kew Jersey Kew Mexico Molalora	47,204 10,278 122,515 21,905 77,145 5,119	325,286 761,467 8,162,076 225,71 215,064 24,732

The report on zinc, complied by C. E. Siebenthal and issued as an advance chapter from "Mineral Resources for 1911," includes a full discussion of the production and price of demestic zinc, by states and districts, as well as of the zinc industry in foreign countries.

A copy may be obtained free on application to the director of the geological survey Washington, D. C. A close extinuate of the zinc production for last year was made by Mr. Slebenthal in January 1912, which is now shown to be within 0.5 per cent of the true figure.
